Plant Parts: Form and Function

Match the function to the plant part:

A: Anchors the plant in the soil.
   Absorbs nutrients & water.

B: Helps the plant stand up.
   Transports food and water up and down the plant.

C: Attracts bees and other insects (pollinators).
   Makes pollen.

D: Catch light to make food for the plant (photosynthesis).
   Takes CO₂ out of the air.

E: Contains the information to create a new plant.
   Stores energy for the new plant.

F: Protects the seeds as they grow.
   Attracts animals to move the seeds around (disperse).
