**Materials**

- Soap
- Water
- Container/bowl
- Pipe cleaners
- Straw
- Towels or paper towels

1. Create your bubble solution by mixing the soap and water in a bowl or container. What do you think will give you more bubbles? More or less soap?

2. Now for your bubble wand, use your pipe cleaner to create a closed shape, like a star or a heart. Combine pipe cleaners for a handle or bigger shape if needed.
   
   *If you have a favorite bubble wand to use, you can skip this step.*

3. Dip your wand into the bubble solution and blow into the film. What works best? Blowing faster, slower, or just waving your wand through the air.

4. Place one end of the straw into the bubble solution. With one hand dip your bubble wand into the solution. With the other hand dip only your palm into the solution.

5. Blow a bubble with your bubble wand. You should be able to catch the bubble with your hand that you dipped into the solution.

6. Take your straw and slightly poke your bubble. Blow into the straw and you should be able to blow a bubble inside of another bubble. Once the bubble film from the straw has been broken, you will need to re-poke the bubble with the straw.
