It's the inspired student that continues to learn on their own.

Neil DeGrasse Tyson
Dear friend,

"It's the inspired student that continues to learn on their own," said Neil DeGrasse Tyson. The Milton J. Rubenstein Museum of Science & Technology has empowered and encouraged hundreds of thousands of students and visitors to discover and learn through remarkable exhibits and programs for 40 years.

Even through the most difficult period the Museum has ever endured - the cancelation of events, reduced staff, and a significant decrease in admissions and memberships - the MOST continues to teach and inspire our community through immersive mentorship programs, STEM (science, technology, engineering, and math) competitions and bringing learning out into the community with pop-up exhibits and field trips that come to the classroom. We continue to offer the same robust events and programs, despite our continuous exposure to the economic disadvantage of the pandemic.

The MOST and its mission exists to support our future scientists, innovators and explorers.

Your support funds world-class exhibits and one-of-a-kind STEM education programs. And it ensures our doors remain open for the entire community through our pandemic recovery and for the next 40 years!

Best wishes,

Lauren Kochian, President
